

FIELD VISION

FieldVision™

Streamlined Environmental Data Recording and Reporting

Tired of hauling pen and paper into the field at a time when everything else can be done on your phone or computer? You shouldn't have to.

Traditional environmental data collection takes time and leaves room for costly compliance errors. With FieldVision, your company can quickly collect and report on data at a fraction of the cost and effort.

WHAT IT IS

FieldVision is a customizable software platform for consistent and compliant mobile field data collection and reporting. Workflow and collaboration are supported by advanced scheduling and notification features. Reliable and secure recordkeeping are supported by cloud-based data storage. FieldVision can be used for a broad spectrum of compliance programs, including:

- Carbon canister inspections
- Drain inspections
- Spill Prevention, Control, and Countermeasure (SPCC) inspections
- Tank inspections
- Surface water inspections

While it comes with standard compliance applications in place, FieldVision is designed as a configurable platform, which means it can be entirely customized to meet your individual facility, site,

or project needs. If you're tracking compliance for one regulatory program or fifteen, FieldVision can account for the unique specifications of each.

HOW IT WORKS

Right now, environmental data collection isn't as easy as it should be. Traditionally, it has involved manually tracking compliance deadlines and heading out into the field to write down data in a notebook. Often, this results in having to transfer data onto clean paper or into Excel back at the office. This cumbersome process inhibits collaboration, increases the likelihood of erroneous data, and complicates records retention, leaving you with limited confidence in your data and compliance.

With FieldVision, the field technician is notified of a required action automatically, collects the data, enters it directly into a mobile phone or tablet, and the data is immediately uploaded to the secure FieldVision platform. The user can then easily generate dashboards and reports with the click of a button—no transcribing numbers, manual counting, or guesswork. Complete, current, and correct data are always available at the click of a button.

WHAT IT CAN DO FOR YOU

- Save valuable time in the field and office
- Decrease costs associated with paper record storage
- Facilitate collaboration through technology-driven workflow
- Reduce data inaccuracies and compliance risks
